THISTLE SYSTEMS RACK INSPECTION SERVICES

Racking Inspections should be a critical element of your annual maintenance programme not only to ensure that the storage facilities themselves are in good order and capable of storing the materials, but also to protect the health and safety of your employees.

Qualified to carry out full racking inspections to SEMA codes of practice, our racking inspector will provide a detailed report of your storage facilities using a simple green, amber and red coding system to prioritise any remedial work required.

THISTLE SYSTEMS RACK INSPECTION SERVICES

Our inspectors will inspect your racking and related working area to ensure it meets with the latest legislative requirements, looking in particular for:

- Structural defects within racking system
- Localise damaged
- Overloading
- Correct installations

- We will then:
- Provide you with a detailed PDF drawing of your racking systems
- Provide a clear and concise report regarding the condition of the racking

By carrying out regular racking inspections, you are not only meeting your legal requirements, you could also save thousands of pounds by replacing small damaged components before the entire structure is affected or an accident occurs.
